

ILIANA MARAVELAKH B6

Project about endangered wild animals and endangered animals under the water.

At this time there are hundreds of animals in extinction and the main cause is the human. All animals depend on other animals.

E.g. Frogs eats flies that flies eat mosquitoes suck blood from humans.

On land there are many endangered animal such as the Black rhino, Amur Leopard, African forest elephant, Bornean Orangutan, Cross River Gorilla, Orangutan, Saola, Giant Panda and much more.

In the sea creatures are also threatened. There are also endangered animals in the sea such as the Vaquita , Blue whale, Fin whale, Whale shark, Loggerhead sea turtle, Hector's dolphin, Galapagos penguin, Atlantic bluefin tuna, pied monk sea and more .

Greece because it is surrounded by Mediterranean Sea, has many different rare species both on land and in the sea. For this reason there are also many animals endangered.

One of them is turtle caretta caretta. Turtle caretta caretta it is a marine reptile belonging to the family Cheloniidae. The average measures around 90cm in carapace length when fully grown The loggerhead sea turtle weighs approximately 132kg. The skin ranges from yellow to brown in colour and the shell is typically reddish brown. The loggerhead sea turtles is found in the Atlantic Pacific and Indian Ocean as well as Mediterranean Sea.

Another animal who is endangered is the kri-kri. Kri-kri is a feral goat inhabiting the Eastern Mediterranean, particularly considered a subspecies of wild goats. Kri-kri today is found only in Greece at the Crete. The Kri-Kri are in disappearing because they are only found in one part of the whole earth in the Crete.

Finally, another endangered species found in Greece is the Mediterranean monk seal. The Mediterranean monk seal is located in the Aegean Sea, the archipelago of Madeira and the Cabo Blanco area in the northeastern Atlantic Ocean. Mediterranean monk seals live about 45 years and their skin is covered by a long curly coat up to 1.5 cm. Their main color is blue and light black.

To protect endangered species we need to do some basic things. During the season when certain species of animals mate, you should prohibit the hunting of these animals by law and protect them. Also, the animal protection department should send notices to the inhabitants of these areas not to go to these areas where these animals live. After all, to kill an endangered species they have to get the yes from animal protection.
