

MY ERASMUS MOBILITY EXPERIENCE

During the last week of November 2025 we visited a host school in Porvoo, Finland!!!

Erasmus+

It was my first time going abroad and I felt very happy, excited and ready to discover Finland and live a new unforgettable experiences!!!

In my opinion, the best parts of the educational programme were when we visited Helsinki and had a tour there with the other students. Apart from that, a very interesting activity was when we baked sweets at the school and then ate them, because we do not have this experience here at our schools. Finally, one of the highlights during this mobility was when we went to a large forest near school where we did some activities in nature and spent time there with the other children.

The most interesting learning activities that we experienced at the host school were art workshops and cooking lessons and the board games that we played there. Moreover, we had some educational and cultural visits in Helsinki and in Porvoo where we visited museums with the other students and the teachers informed us about them.

My participation in the Erasmus mobility was very useful and interesting for me in many ways. Firstly, I visited a country abroad for the first time and it was very interesting seeing a country that has a lot of differences from my country. Also, nature and forests there differed from our nature and forests here in Greece and the climate there was pretty cold compared to Greek weather and that made the trip very interesting. Last but not least, I was very interested in experiencing the Finnish culture and lifestyle.

Of course I would like to take part in another Erasmus project in order to experience another country, to meet other people and to have new unique memories and finally to observe a different society and culture.

I would definitely recommend to other students taking part in Erasmus projects, because it would be very beneficial for them. First of all, they would explore a country that they would visit for the first time. Also, going abroad at this age helps students be more responsible and mature. Last but not least, by taking part in an Erasmus project they would interact with other people and explore new cultures.
